

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1. (currently amended)

An automated computer-controlled field-deployable  
2 monitoring system for collection and analysis of environmental  
contaminants and determining the concentration of an analyte of  
4 interest in ground water, industrial and surface water, comprising:

diversion means dividing a water sample into first and  
6 second flow paths, said first flow path directing the water  
sample to a sample chamber for analysis, and the second flow  
8 path passing the water sample through one of (a) a media, (b) a  
chamber, to eliminate the analyte of interest before introduction  
10 of water into the a sample chamber,

a calibration assembly to add a standard of predetermined  
12 concentration of analyte to the water after it passes through  
one of (a) the media, (b) the chamber, to eliminate the analyte  
14 of interest, -and-

means to reunite said first and second flow paths into a  
16 single flow path, and

an analytical assembly to receive water from said single  
18 flow path to determine the concentration of the analyte in the  
sample water for either of the first or second flow paths.

## 2. (original)

2 An automated monitoring system according to Claim 1,  
and further comprising a calibration loop for establishing  
a predetermined amount of standard solution.

## 3. (original)

2 An automated monitoring system according to Claim 1,  
and further comprising:

means to provide a matrix modifier, and

4 a valved loop defining a volume of matrix modifier  
introduced into the sample chamber.

## 4. Canceled.

## 5. (currently amended)

An automated monitoring system according to Claim 1, ~~wherein:-~~  
2 and further comprising a casing for the analytical and  
calibration assemblies ~~-are-disposed-in-a-casing-separate-~~  
4 ~~from-a-monitoring-well-casing-~~ to provide improved  
environmental control, ease of maintenance and security.

## 6. (previously presented)

An automated monitoring system according to Claim 1,  
2 and further comprising means for stirring a ground  
water sample to enhance volatilization of concentration of  
4 the analyte in the sample.

## 7. (original)

An automatic monitoring system according to Claim 1,  
2 wherein trichloroethylene is the analyte of interest, and  
monitoring and analysis are performed utilizing an optrode  
4 assembly and procedure.

8. (currently amended)

~~An-automated-computer-controlled~~ A method for  
2 determining concentration of an analyte of interest in ground  
water and surface water, comprising: ~~-the-steps-of-~~

4 providing a field deployable automated computer- controlled  
monitoring system for determining concentration of an analyte of  
6 interest in ground water and surface water,

collecting and transporting a water sample to a preparatory  
8 treatment assembly,

passing the water sample to diversion means to divide  
10 the water sample into first and second flow paths, said first  
flow path directing the water sample to a sample chamber for  
12 analysis, and the second flow path passing the water sample  
through one of (a) a media, (b) a chamber, to eliminate the  
14 analyte of interest before introduction of water into the  
sample chamber,

16 passing the water sample to a calibration assembly to  
add a standard of predetermined concentration of analyte to the  
18 water sample after it passes through one of (a) the media, (b)  
the chamber, to eliminate the analyte of interest, ~~-and--~~

8. (currently amended - continued)

20           reuniting said first and second flow paths into a  
          single flow path, and

22           passing the single flow water sample to an analytical  
assembly to determine the concentration of the analyte in the  
24 sample water for either of the first or second flow paths.

## 9. (original)

A method according to Claim 8, and further comprising:

2       introducing calibration standards into a standard  
container and transporting the standard by a sample vessel.

## 10. (previously presented)

2       A method according to Claim 8, and further comprising  
the steps of:

4       calibrating for analysis by providing a predetermined  
amount of standard solution via a calibration loop and passing  
it into the sample chamber.

## 11. (original)

A method according to Claim 10, and further comprising:

2       passing the sample from a well casing to a calibration  
system to prepare blanks or standards for addition of the  
4       standard directly for use in the analytical assembly.

## 12. (previously presented)

A method according to Claim 8, and further comprising  
2 the steps of:

introducing the sample into a sample vessel  
4 until a lower sensor is satisfied, and

adding water to the sample vessel from a water  
6 treatment cartridge until an upper water level sensor in  
the sample vessel is satisfied to provide a predetermined  
8 dilution.

## 13. (previously presented)

A method according to Claim 8, wherein the analyte  
2 of interest is trichloroethylene and analysis utilizes an  
optrode assembly.

## 14. (previously presented)

2 A method according to Claim 8, and further comprising  
relaying analysis data from the analytical assembly to a  
communication system for transmission to a cognizant agency.

## 15. (previously presented)

2 An automated monitoring system according to Claim 1,  
and further comprising a sampling device within a well  
casing and comprising valve means and water level sensor  
4 means to provide a ground water sample of predetermined  
volume.

## 16. (previously presented)

An automated monitoring system according to Claim 15,  
2 and further including a treatment assembly to receive the  
sample from the sampling device, said treatment assembly  
4 comprising means to provide a calibration standard for the  
analytical assembly, and one of (a) a treatment cartridge  
6 to filter the sample and a calibration sensor, (b) a source  
of analyte-free water connected with the treatment assembly.

## 17. (previously presented)

An automated monitoring system according to Claim 1,  
2 and further comprising means to receive analysis and assay  
data from the analytical assembly to transmit the data to a  
4 cognizant agency.
